

Termination Equipment

Ipas Manual Vacuum Aspiration Instruments

Manual Vacuum Aspiration (MVA) is a simple and effective method for uterine evacuation. The procedure is 99% effective ⁵, with lower complication rates than D&C ⁶, quick to perform, gentle and patient-friendly.

A joint publication by WHO, UNFPA, UNICEF and the World Bank and endorsed by the International Confederation of Midwives and FIGO recommends MVA as the procedure of choice:

“The preferred method of evacuation of the uterus is by manual vacuum aspiration. Dilatation and curettage should be used only if manual vacuum aspiration is not available.” ⁷

103

Ipas Manual Aspirator 103

Patented locking valve system allows creation of vacuum prior to beginning the procedure.

MVA Plus	DISP0023060	£8.42
Single Valve*	DISP0022060	£4.82

Specialist abortion help

Marie Stopes International is the leading provider of sexual and reproductive healthcare services in the UK and its network of clinics now sees over one third of all women seeking abortion services in the UK.

How can we help your patients?

We provide friendly and completely confidential services and have a dedicated **24 hour support** line that patients can ring for information, appointments, and all aftercare advice. There is no wait for appointments and a choice of treatment options is available.

How can we help you?

Marie Stopes International works closely with over **70 primary care trusts** who have contracts with us, and patients can be referred for both NHS and private services.

Referring a patient to Marie Stopes International has never been easier with the introduction of electronic referral forms compatible with most GP database systems including EMIS and VISION.

For referral details for your PCT or to request a sexual health pack
